

**Hi... So for this homework question It says " Amy bought 2 and 1/2 gallons of paint for \$60. What is the cost for 1 gallon of paint? " so if you make the 2 and 1/2 improper to 2 and then you make the equation  $60/2/1$  and flip  $2/1$  to  $1/2$  and times those you get  $2/2$  do that equals 1 whole. Then you go to the top and do 60 times  $1/2$  and you get  $60/120/1$  would you put that or do you put something else like  $120/1$  ?**

I'm sorry but the solution you proposed was a bit hard to follow, so I'll just post my solution: we convert "2 and 1/2" to a single fraction:

So, we know that  $5/2$  gallons cost 60 dollars, which means

To find the cost of a single gallon, we have to solve the equation for g:

The legend not investigated in North America was: Fountain of Youth Inca gold rich Indian tribes golden houses

What is the gravitational force between two masses of 15kg each, when their centers are 0.25m? Could you detect this force with even sensitive equipment?

The \_\_\_\_\_ is a measure of the average change in prices of a market basket of goods and services. inflation
