The best way to reduce wind erosion on a farm is to _____. cut down windbreaks

stop planting crops

stop irrigating unused fields

plant ground cover in unused fields

How can I determine the value of x that will make the expression a real

?x-1

Prime Factorization

A diffraction grating with 1000 lines per mm is used in a spectrometer to measure the wavelengths of light emitted from a gas discharge tube. You measure the diffraction angle to be at 20° for one emission line. What would happen to this emission line's diffraction angle if you replaced the diffraction grating with one having 500 lines per mm instead

Sin theta =0.76, find theta
