

1. Suppose you give a shopping cart a push and it begins to roll across the parking lot. Once you have stopped pushing it, it slows down and comes to a stop. Observation consistent with Newton's First Law? Why or why not?

Newton's first law says the cart should keep going if there's no force acting on it to slow it down. But it slows down and stops. Is there any force acting on it? You bet! There's friction in the wheels, and a little bit of air resistance too.

Plant can regulate its temperature and water by opening and closing stomata. true or false
